from Renovate to Elevate

SCALING THE AMERICAS CONSUMER DATA ECOSYSTEM

March, 2026

THE FUTURE OF MARKETING REQUIRES A NEW DATA FOUNDATION

AI-READY MARKETING
General-purpose AI needs trusted, machine-readable brand and consumer context to be effective

REAL-TIME ORCHESTRATION
The window of opportunity to engage consumers is shrinking to milliseconds.

AGENTIC COMMERCE
Future consumer journeys will be highly automated; our data foundation must be ready to support this scale.

ELEVATE IS NOT JUST A TECHNICAL UPGRADE; IT IS THE PREREQUISITE FOR OUR FUTURE MARKETING CAPABILITIES.

C1 - Internal use

WE HAVE PROVEN THE VALUE, BUT WE ARE STRADDLING TWO ECOSYSTEMS

WHAT WE ACHIEVED

Initial CDP enablement delivered on AWS, Databricks, and Hightouch.

WHAT REMAINS TRUE

Foundational capabilities (control, trust, stability) are incomplete

THE CHALLENGE

Legacy remains expensive but still underpins active business demand (B2C, B2B, 3 regions).

WE MUST TRANSITION FROM A "VALUE DEMONSTRATION" PHASE TO A STABILIZED, ENTERPRISE-GRADE OPERATING MODEL.

HOW ELEVATE INITIATIVES MAP TO THE 4 STRATEGIC CAPABILITIES

TRUSTED CONSUMER CONTEXT
Foundation for AI-ready personalization and decisioning

SPEED AND SIMPLICITY OF CHANGE & MAINTENANCE
Foundation for agility, efficiency, and lower cost of change

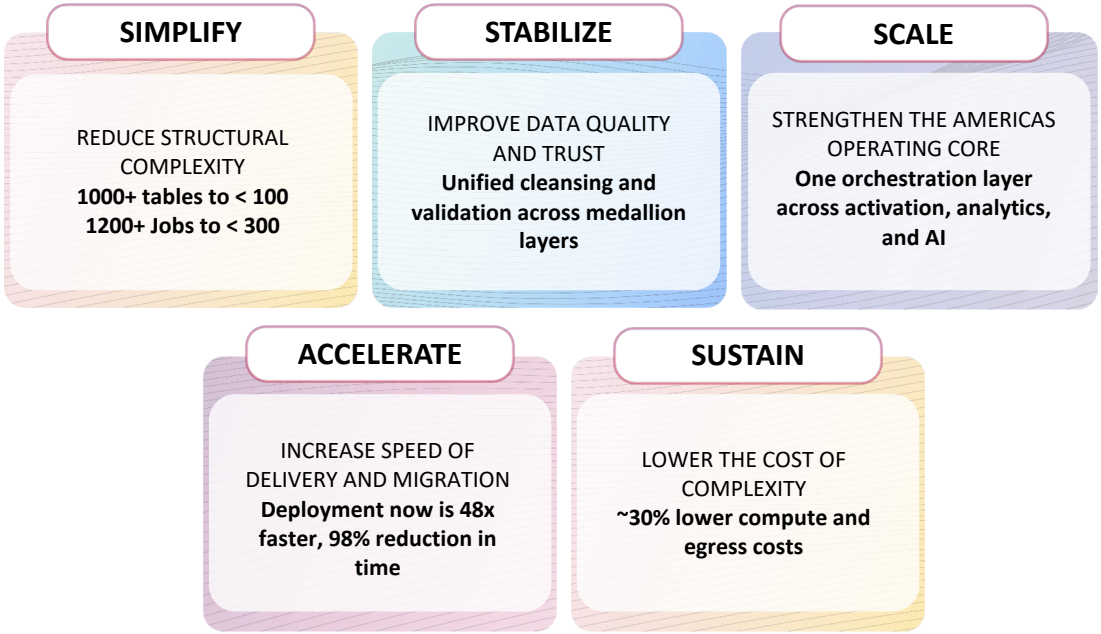

REAL-TIME ACTIVATION AND DECISIONING
Faster, more relevant activation across channels

FUTURE-READY OPERATING MODEL
The governance, guardrails, and ownership needed to scale safely

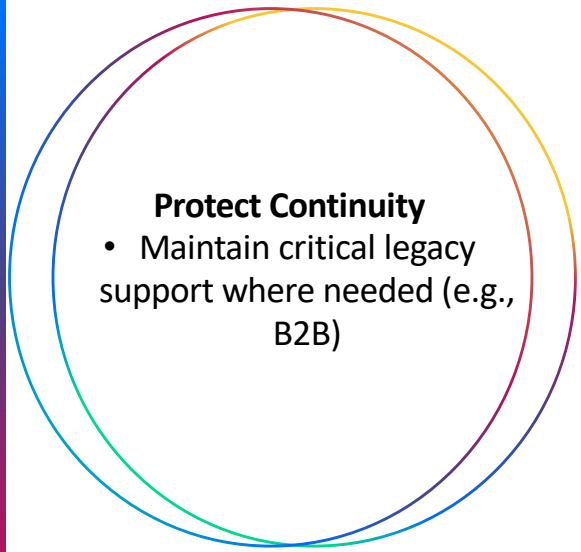

RENOVATE ALREADY DEMONSTRATED MEASURABLE BUSINESS VALUE

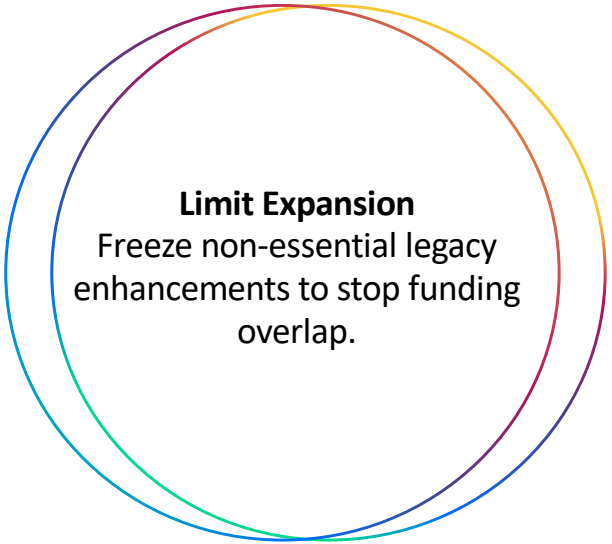

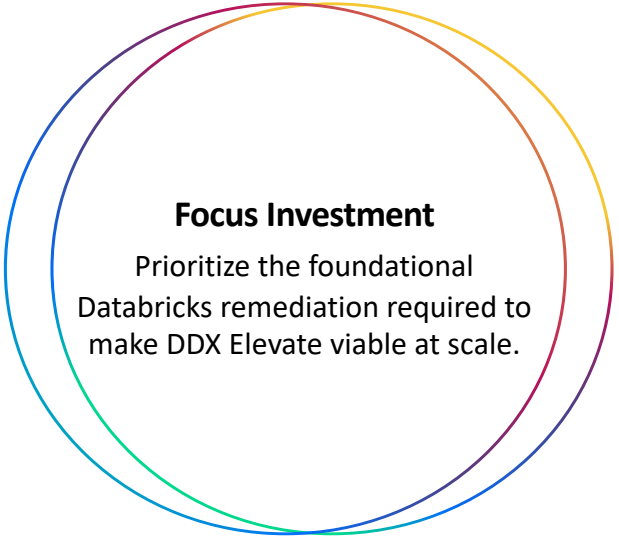

ELEVATE TURNS DATA SIMPLIFICATION INTO TRUST, SPEED, SCALE, AND COMPETITIVE MARKETING CAPABILITY

C1 - Internal use

A CONTROLLED TRANSITION IS THE MOST BALANCED PATH FORWARD

THIS IS A MANAGED TRANSITION OF A SHARED BUSINESS ECOSYSTEM, NOT A SIMPLE "SWITCH-OFF" REPLACEMENT.

ELEVATE CONSOLIDATES THE CONSUMER DATA STACK

BUSINESS CAPABILITY	CURRENT STATE	TARGET-STATE DIRECTION	BUSINESS BENEFIT
DATA INGESTION AND OPERATIONAL DATA	AWS components distributed across *DynamoDB, Lambda, microservices, Cassandra, and S3*	Consolidate core data operations into Databricks, Lakebase, S3, and API Gateway	Lower complexity, fewer dependencies, faster change
CONSUMER AND ACCOUNT DATA FOUNDATION	Consumer, account, and professional data distributed across systems and workspace patterns	Standardize through Databricks medallion architecture, Unity Catalog, curated data products, and Lakebase where relevant	More trusted, governed, reusable data across Americas
IDENTITY RESOLUTION AND CONSUMER RECOGNITION	Reltio-led IDR / survivorship *Decision on Hightouch role still being assessed*	Confirm target IDR pattern for known and anonymous consumers, with real-time requirements validated	More complete consumer recognition and better personalization
ACTIVATION, ANALYTICS, AND JOURNEYS	Features supported through fragmented logic and multiple technical dependencies	Deliver standardized datasets and profiles for journeys, segmentation, analytics, reporting, and activation	Faster activation, more consistent experience, stronger conversion potential

TECHNOLOGY TRANSITION: SIMPLIFY THE STACK WHILE PRESERVING CRITICAL BUSINESS CAPABILITIES

CURRENT TECH	TARGET STATE	TRANSITION TREATMENT	RATIONALE
CASSANDRA	Lakebase / Databricks	🔄 Migrate / consolidate	Reduce operational complexity and consolidate platform capabilities
LAMBDA	Lakebase / Databricks-native patterns / API Gateway as needed	⛔ Retire where no longer required	Reduce fragmented orchestration and custom service maintenance
DYNAMODB	Lakebase / Databricks where appropriate	🔄 Assess and migrate targeted workloads	Simplify operational data management and reduce duplication
MICROSERVICES	Lakebase / Databricks-native services / APIs	🔄 Rationalize	Retain only services that provide clear domain value
JAVA UDFS	Standardized Databricks patterns	⛔ Reduce / retire	Improve maintainability, performance, and governance
RELTIO	Reltio retained or evolved based on IDR decision	❓ Decision under validation	Preserve or strengthen identity-resolution capability
HIGHTOUCH	Activation platform; IDR role to be assessed	❓ Decision under validation	Validate whether scheduling meets real-time IDR needs
DATABRICKS	Databricks + Unity Catalog + Medallion + Lakebase	✅ Retain and expand	Core governed data and activation foundation
AWS S3 / API GATEWAY	Retained	✅ Retain and modernize	Core cloud storage and integration services

ELEVATE ROADMAP: SEQUENCED BY STRATEGIC CAPABILITY

BUILD TRUSTED CONTEXT

- Strengthen medallion foundations
- Improve cleansing/standardization
- Resolve critical tech debt.

ENABLE ACTIVATION AT SCALE

- Consolidate Canada/LATAM into one Americas DDX instance and migrate priority legacy capabilities.

SCALE SPEED & READINESS

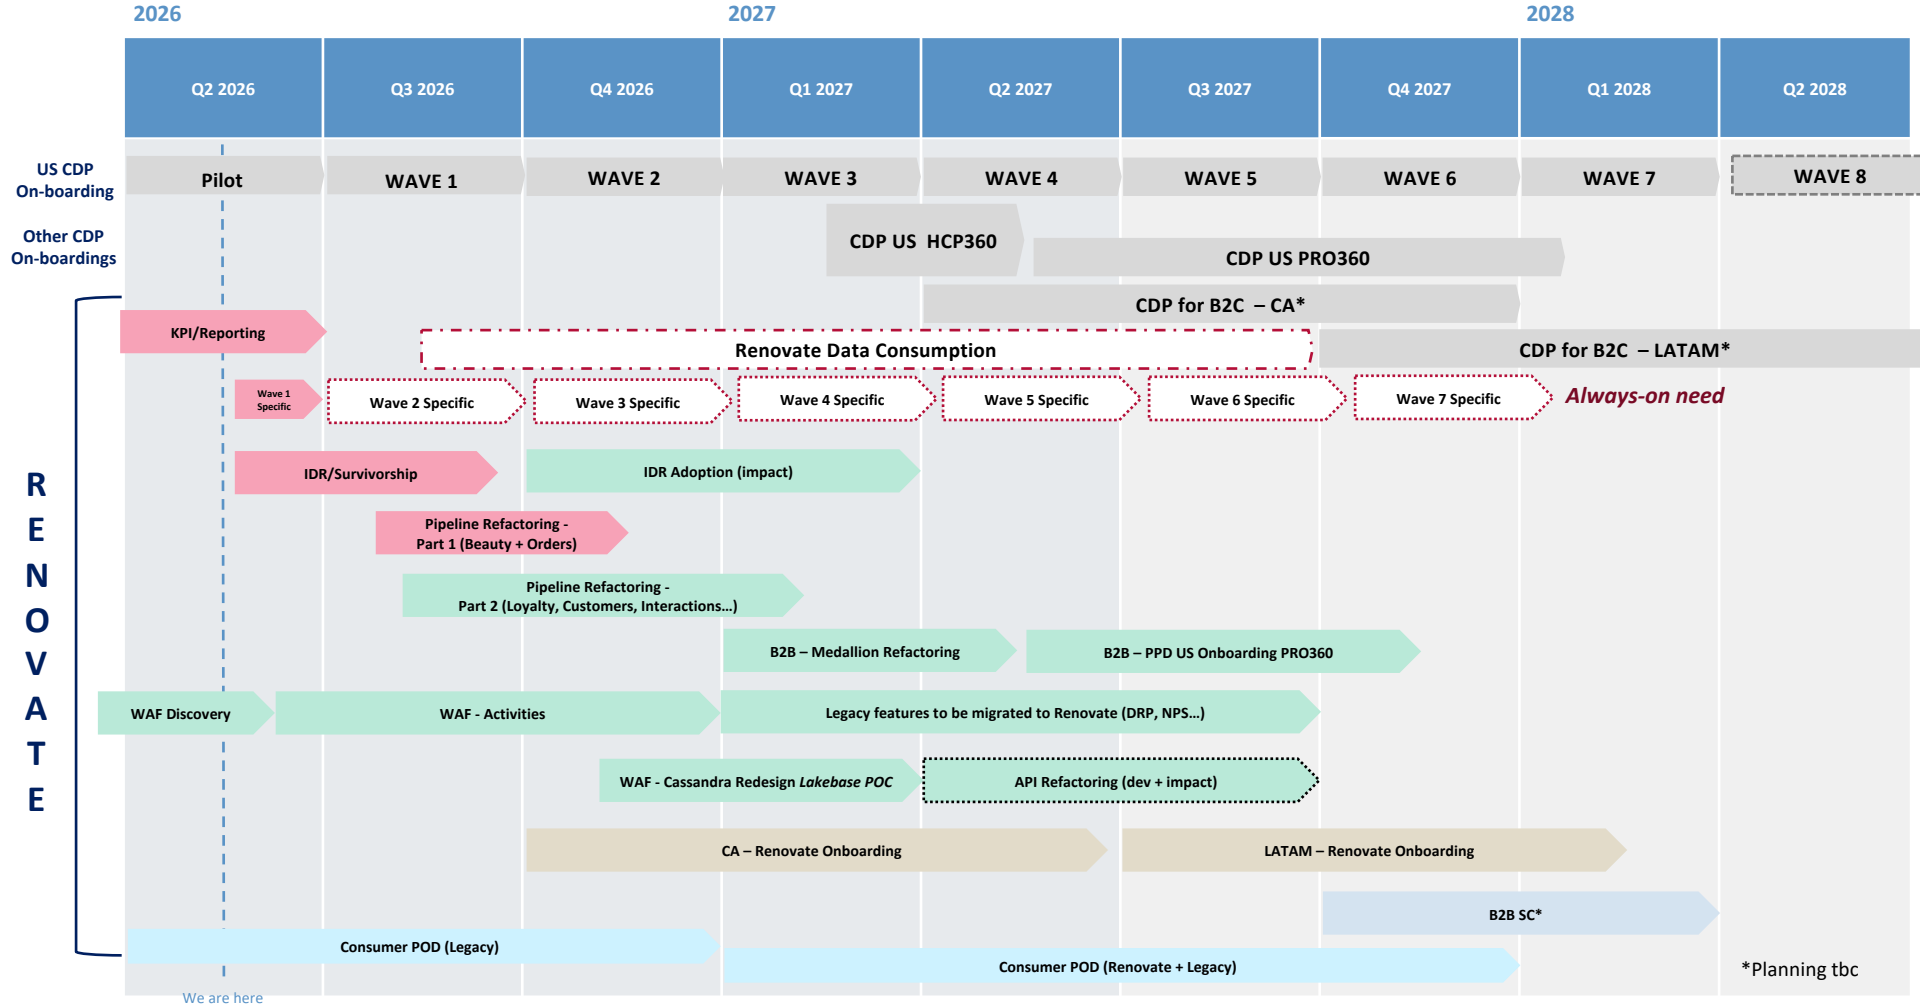

- Institutionalize the Build-to-Run handover and progressively reduce the legacy footprint.

B2C MOVES FIRST; B2B REMAINS TEMPORARILY ANCHORED IN LEGACY TO PRESERVE CONTINUITY BEFORE TRANSITIONING

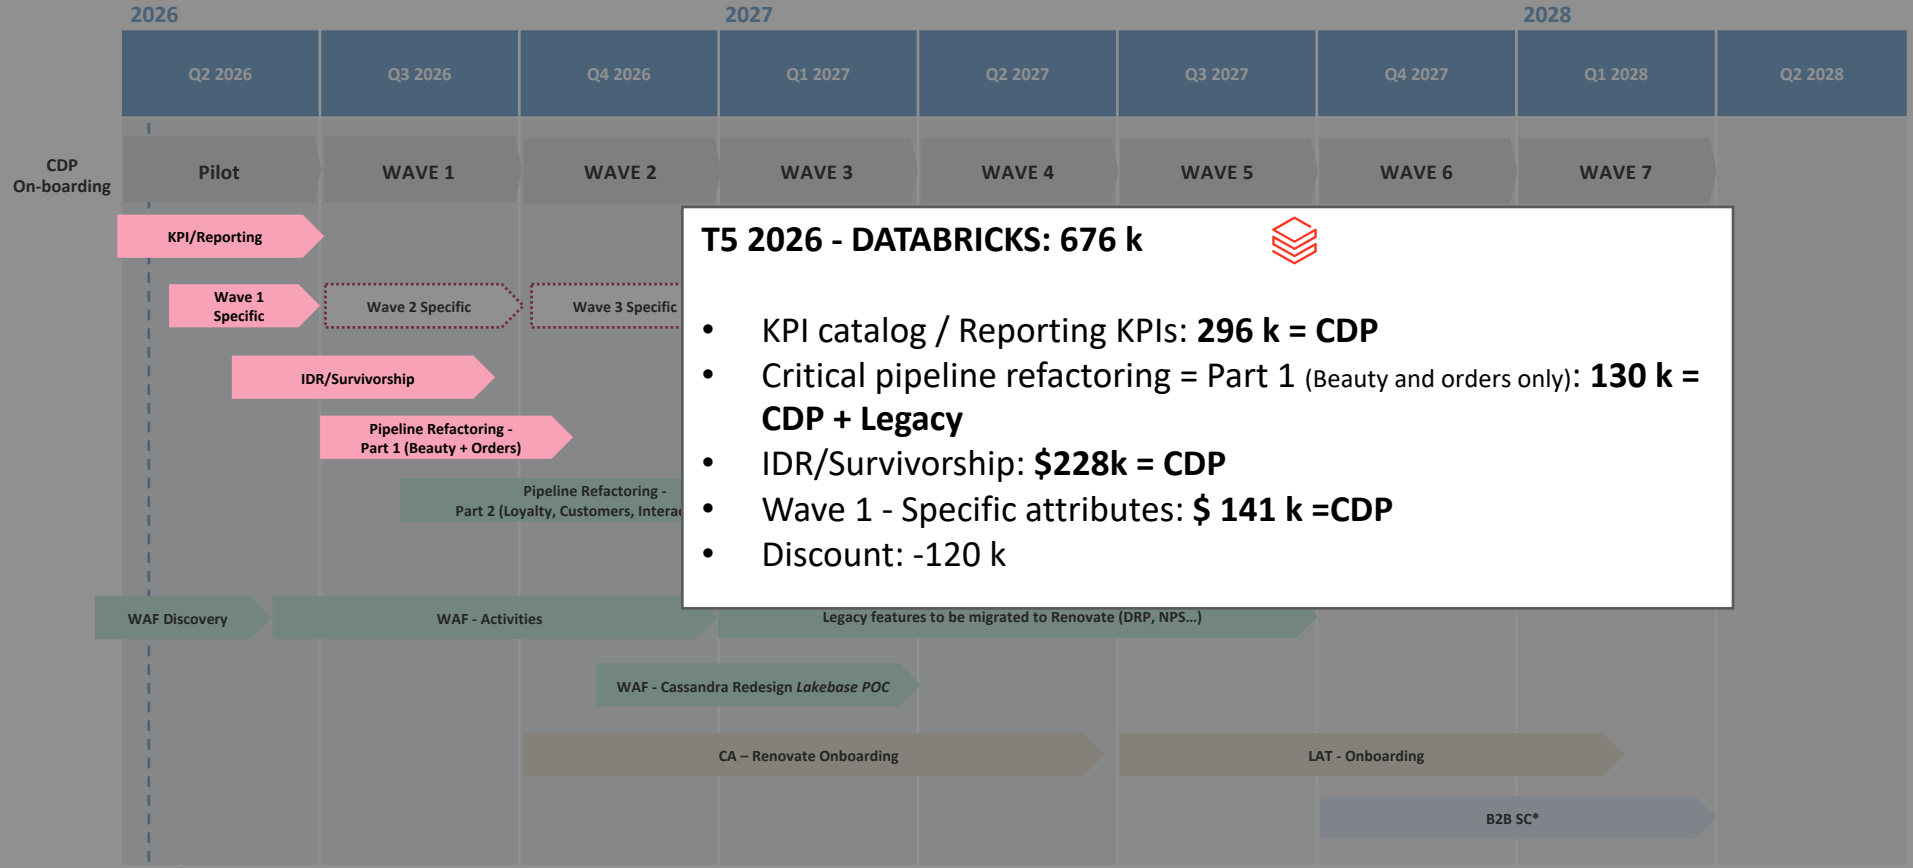

Elevate ROADMAP (proposal)

WIP

DB – New PO | New RFP

AURA ROADMAP (proposal)

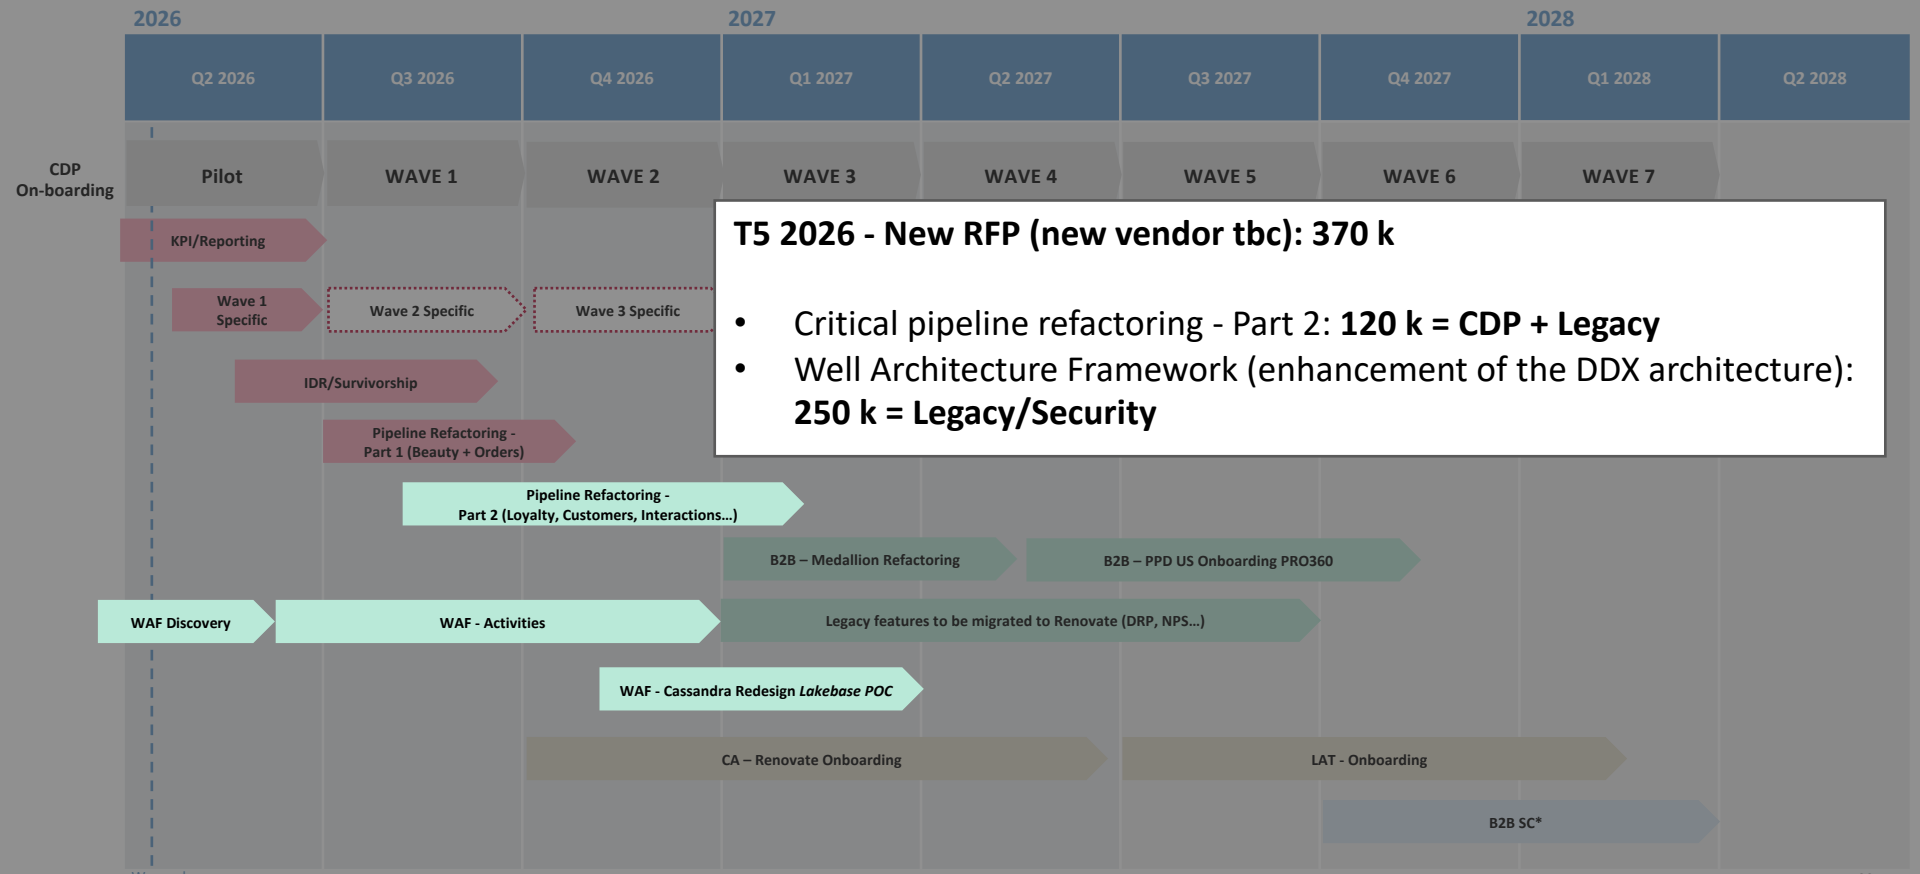

T5 2026 - DATABRICKS: 676 k

- KPI catalog / Reporting KPIs: **296 k = CDP**
- Critical pipeline refactoring = Part 1 (Beauty and orders only): **130 k = CDP + Legacy**
- IDR/Survivorship: **$228k = CDP**
- Wave 1 - Specific attributes: **$ 141 k =CDP**
- Discount: -120 k

C1 - Internal use

AURA ROADMAP (proposal)

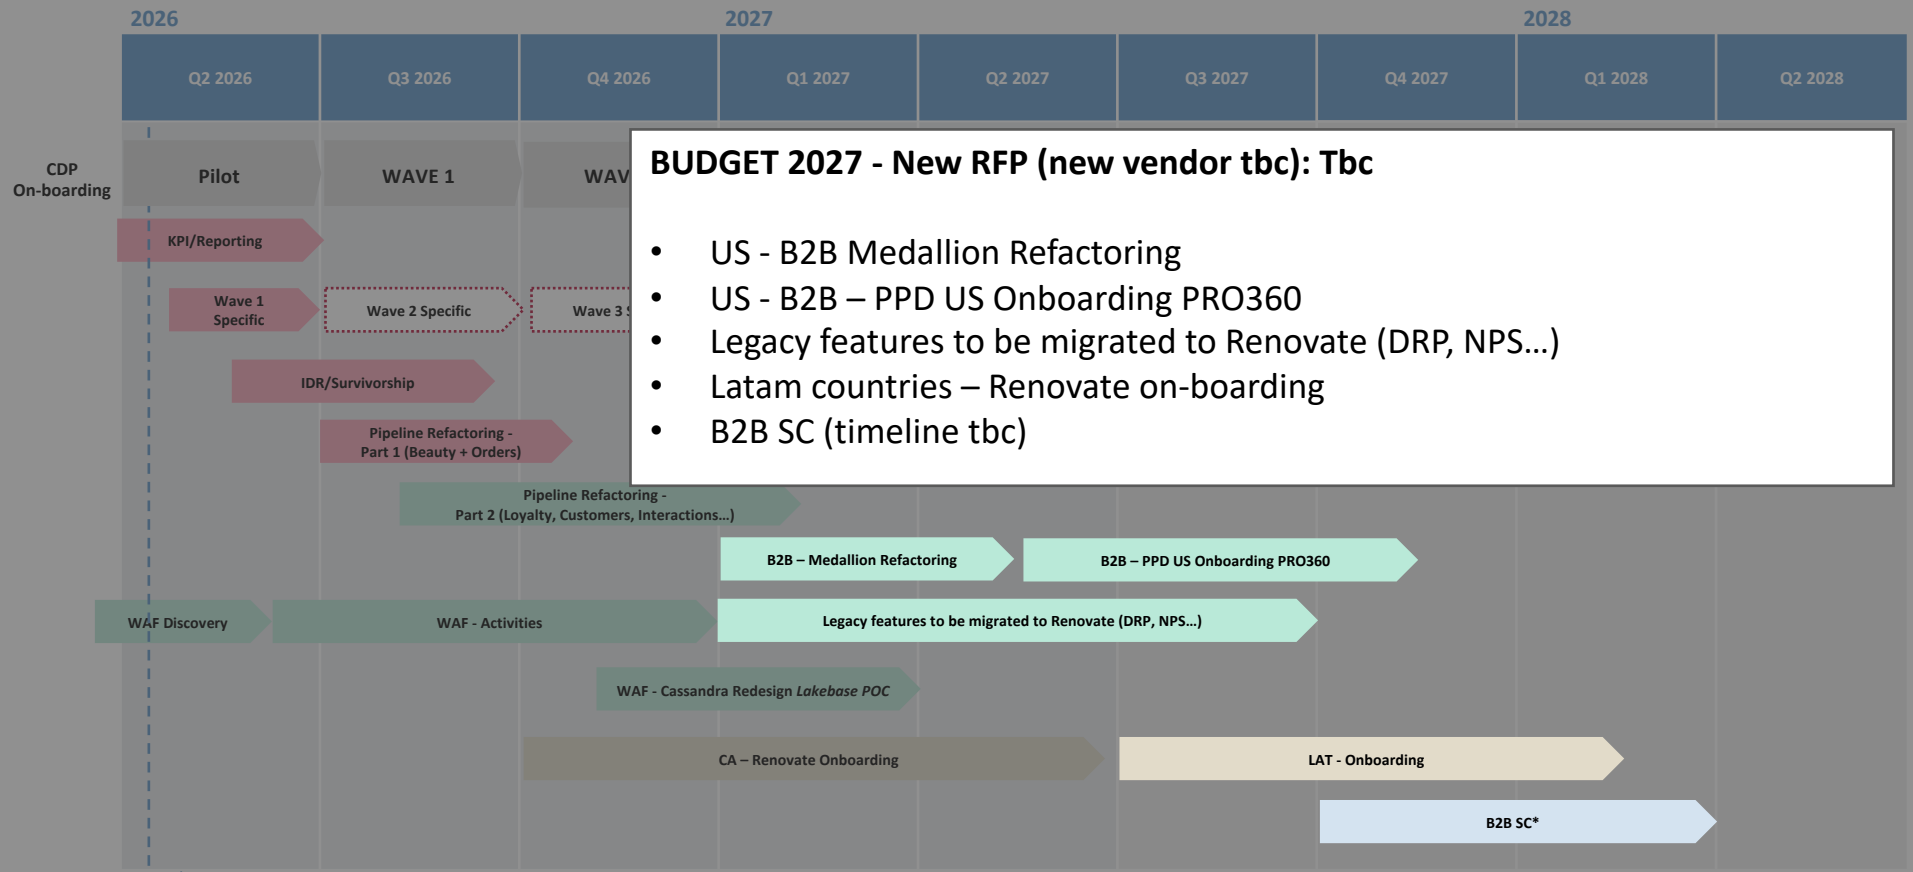

T5 2026 - New RFP (new vendor tbc): 370 k

- Critical pipeline refactoring - Part 2: **120 k = CDP + Legacy**
- Well Architecture Framework (enhancement of the DDX architecture): **250 k = Legacy/Security**

Planning tbc

C1 - Internal use

AURA ROADMAP (proposal)

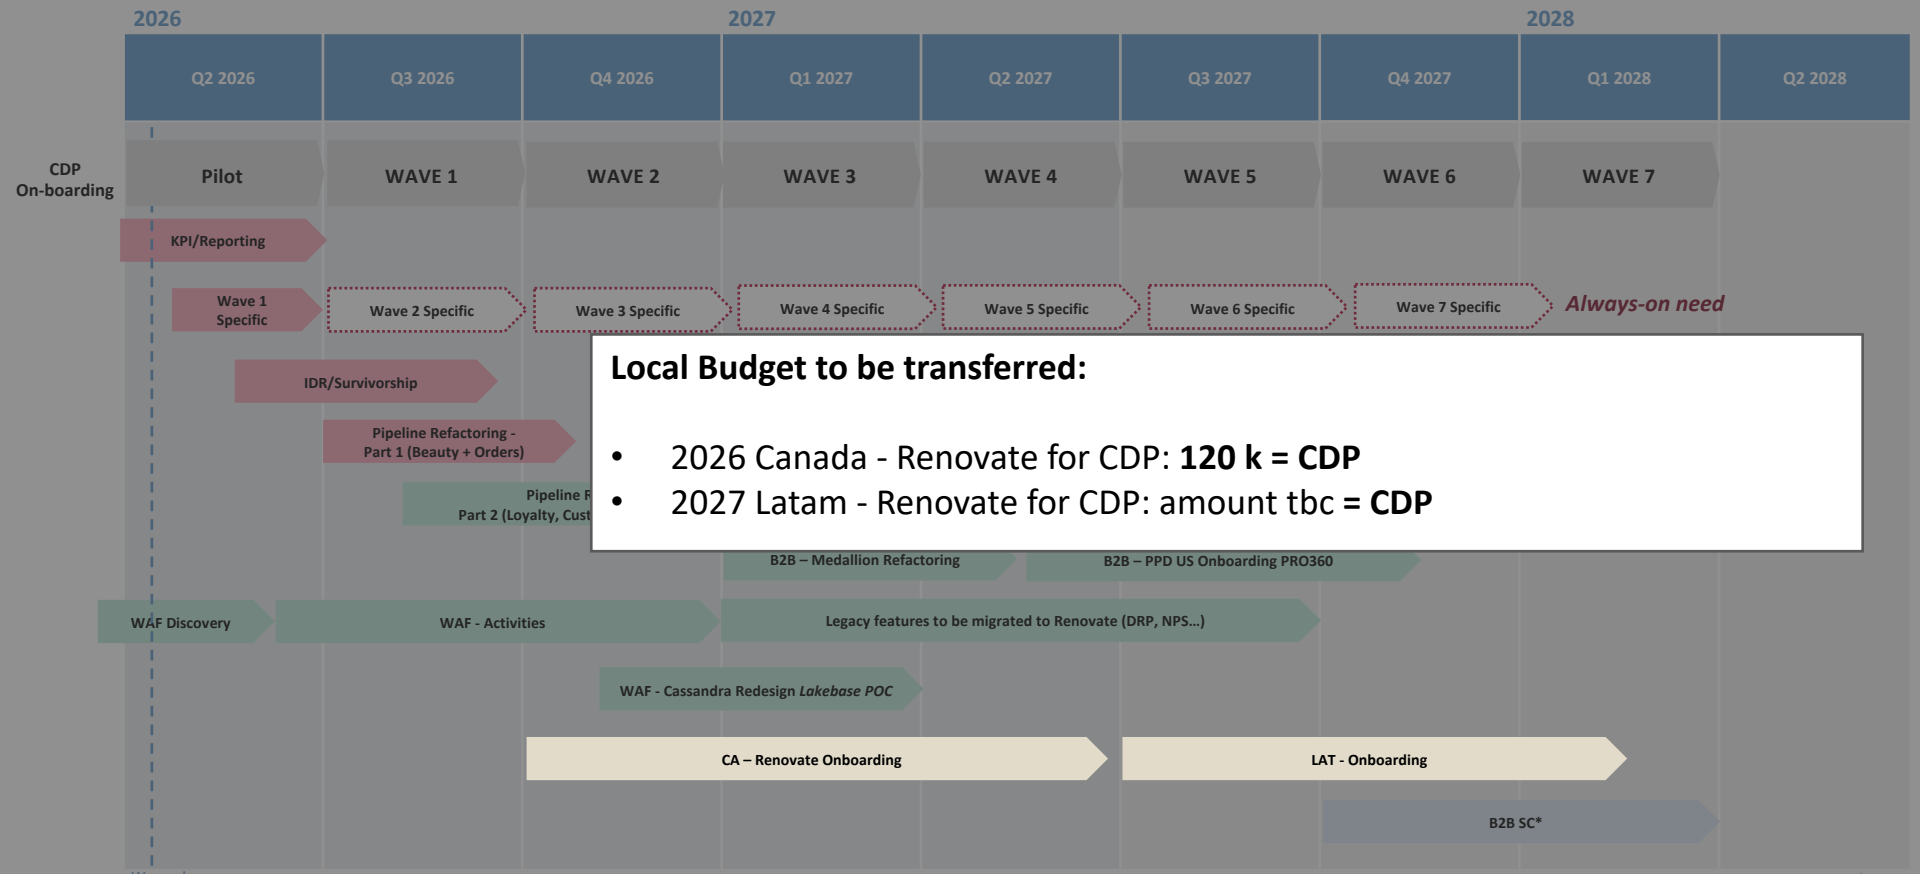

BUDGET 2027 - New RFP (new vendor tbc): Tbc

- US - B2B Medallion Refactoring
- US - B2B – PPD US Onboarding PRO360
- Legacy features to be migrated to Renovate (DRP, NPS…)
- Latam countries – Renovate on-boarding
- B2B SC (timeline tbc)

C1 - Internal use

AURA ROADMAP (proposal)

Local Budget to be transferred:

- 2026 Canada - Renovate for CDP: **120 k = CDP**
- 2027 Latam - Renovate for CDP: amount tbc **= CDP**

C1 - Internal use

RENOVATE BUDGET - SUMMARY

T5 – 2026 RENOVATE

T5 – 2026: Databricks = 676 k

- KPI catalog / Reporting KPIs: **296 k = CDP**
- Critical pipeline refactoring = Part 1 (Beauty and orders only): **130 k = CDP + Legacy**
- IDR/Survivorship: **$228k = CDP**
- Wave 1 - Specific attributes: **$ 141 k =CDP**
- Discount: -120 k

+

T5 – 2026: New RFP = 370 k

- Critical pipeline refactoring - Part 2: **120 k = CDP + Legacy**
- Well Architecture Framework (enhancement of the DDX architecture): **250 k = Legacy/Security**

+

T5 – 2026: CA Local budget Transfer = 120 k

- 2026 Canada - Renovate for CDP: **120 k = CDP**

TOTAL T5 2026 = 1,046 k + 120k of budget transfer

Notes:
- CDP needs to finish 2026 = 676 k but no buffer for Wave 2 Specifics
- WAF to be started before CDP Wave 2

BUDGET – 2027 RENOVATE

B2027 : New RFP = Tbc

- US - B2B Medallion Refactoring
- US - B2B – PPD US Onboarding PRO360
- Legacy features to be migrated to Renovate (DRP, NPS…)
- CA – Renovate remaining scope
- Latam countries – Renovate on-boarding
- B2B SC (timeline tbc)

+

B2027: Local budget Transfer = tbc

- 2026 Latam - Renovate for CDP: **Tbc = CDP**

Estimations on-going

RENOVATE BUDGET - SUMMARY

RENOVATE

- **2025 = 1.4 M**
  - Credits: 0.9 M
  - PO: 0.382 M

- **2026 = 1.4 M + 0.12 M for CA**
  - Credits: 0.3 M
  - Additional CDP budget: 0.676 M
  - New RFP: 0.370 M
  - Renovate – CA: 0.12 M

- **2027 = TBC**
  - Renovate – LATAM: Tbc

Legend
Paid / Used
Additional need

C1 - Internal use

INBOUND/OUTBOUND: KEY FINDINGS

#1. Databricks: RENOVATE
- ✓ Data replicated from **Prod to Staging**
  - ✓ This is a serious **security** concern.
- ✓ **SFCC data** is sent to **DDX Staging** environment.
- ✓ 2025 Compute costs: **$ 2 M**

#2. Dynamo DB (DDX and DDXL) – AWS Services
- ✓ **> 1000 tables: why?** complexity and heavy maintenance
- ✓ Reserved capacity not bought:
- ✓ Data **over consumption**
- ✓ Retention and back up policies not defined (nothing done since recommendation done in 2020)

#3. AWS S3
- ✓ **Per month $100k.**
- ✓ Need to review retention and back up policies **(costs, performance impacts)**.

#4. AWS Lambda
- ✓ **Node.js** upgrade to the latest version. Change the Architecture from X86 to ARM64 for **30% more performance and 20% less costs**.
- ✓ Delete the unused Lambda functions

#5. Cassandra
- ✓ **24 servers** (6 prod 13 dev, 5
- ✓ Disaster recovery Plan **(DRP)**: **NEVER tested**

#6. Data Transfer Charges between AWS Accounts and Regions
- ✓ A lot of **data egress costs** across AWS Accounts and Regions.

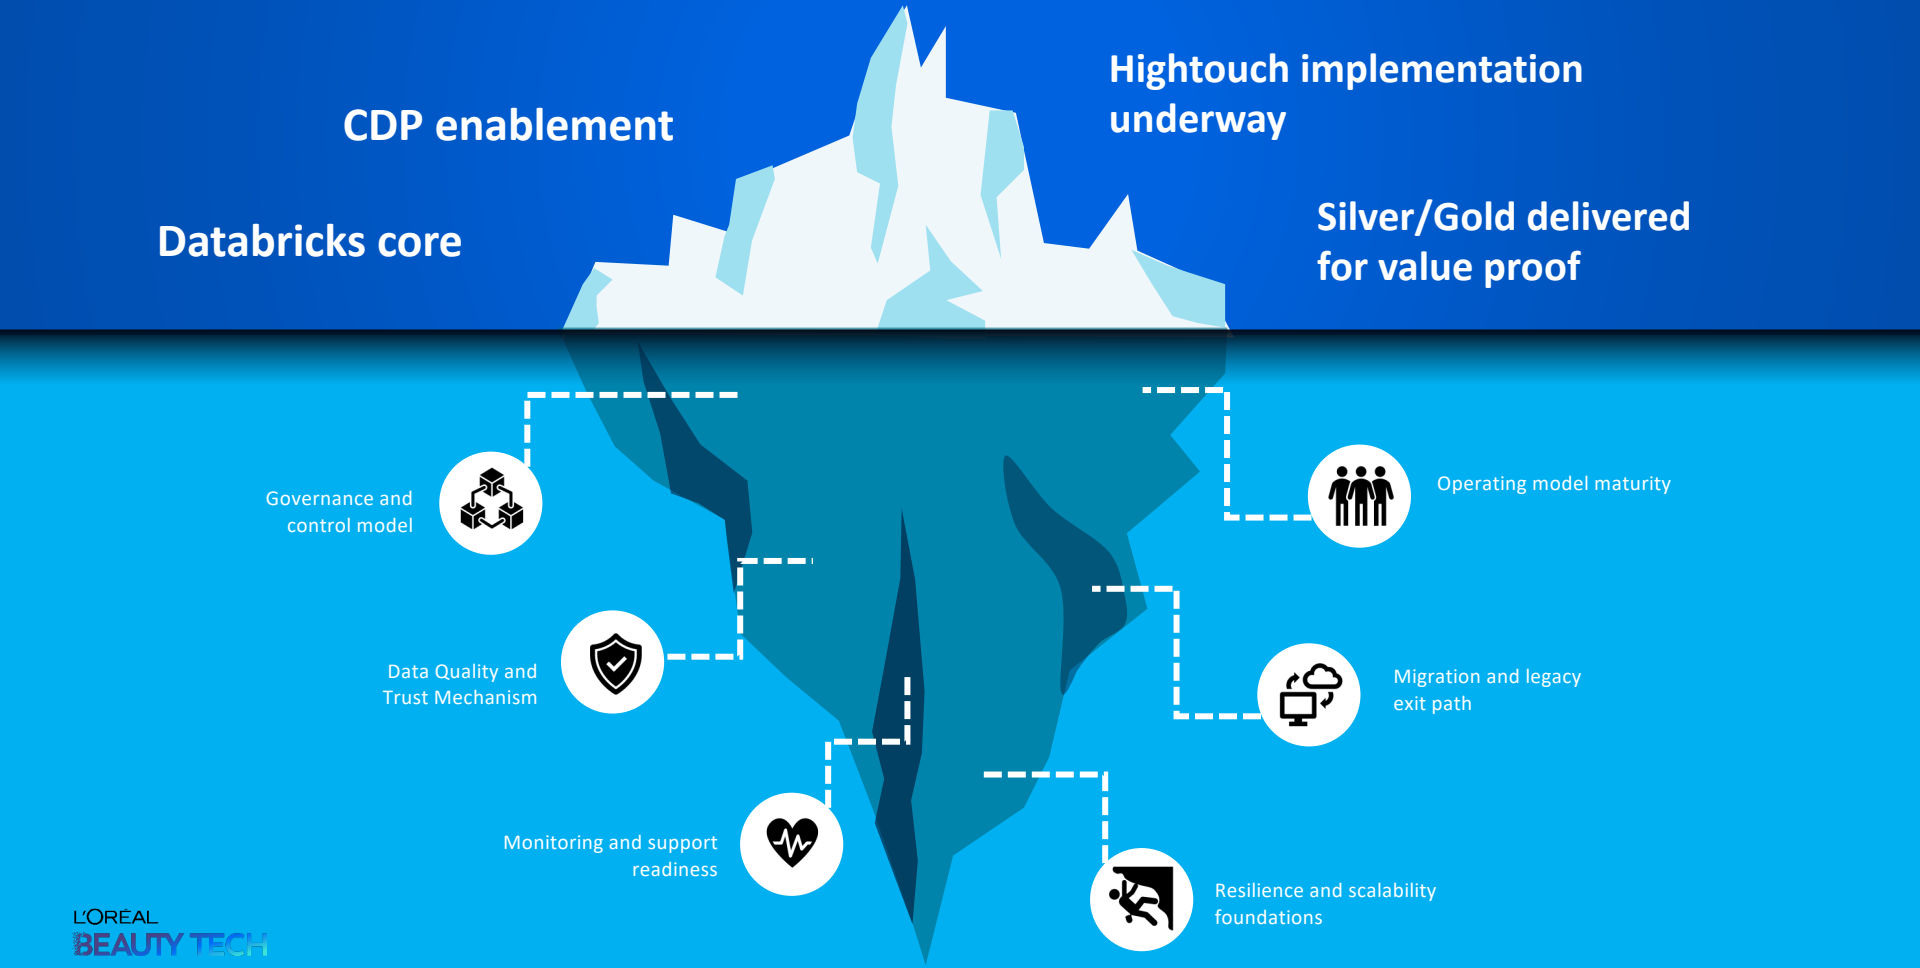

#7. Reltio
- ✓ **> 450 different sources**
- ✓ **7 environments**: 4 dev 2 staging 1 prod,
- ✓ **76 M records** >> our quota M 70. Risk of extra fees
- ✓ **Out of 76 M customers: 4 M to be cleaned**

#8. Attentive
- ✓ Only Production environment: risk of triggering test files during test phases

#9. Tableau +
- ✓ Expensive: **costs** (CDP RFP: to be moved to PBI)

#10. AWS Kinesis
- ✓ On-Demand to **Provision model (~ 30% of expected savings)**
- ✓ Check how many Kinesis streams are in use. Delete the unused streams

THE INITIAL RELEASE COVERS ONLY THE VISIBLE LAYER OF THE TRANSFORMATION

L'ORÉAL BEAUTY TECH

the program has demonstrated value, but not yet full operating maturity

NEXT GEN DDX - SCALE AND OPTIMIZE

Renovate
Delivered by Databricks Professional Services pending transition to SI

Luis + Jagan

Bronza Refactoring
Ingestion to be reshape for performance and traceability

Eleazar + Allan

Cassandra redesign
Explore new tech like Lakebase
AWS Keyspaces *

Eleazar + Allan

API upgrade/refactor
Simplify our API based on Gold Needs
Simplify tech (DDXL synergies)

Alam

Legacy Features
transfer key features into the new data architecture (Privacy, NPS, GDM (SDDS), among others)

Andres + Eleazar + Luis

IDR & Survivorship
Rethink the way IDR spread data and how we survive profiles

Fatima + Eleazar

Gold the new Reporting
Enable all users for new domains usage.
ML practice to be co-created*

Alam

Canada/LATAM onboarding
Move all the data into one consumer profile, using a single instance of the product for the Americas

Web Navigation for real-time
Explore server-side serving layer for all platforms data consumers.
Get what you need or push what we want to serve. *Event base architecture?*

B2B Medallion upgrade
Secure Best practices from Renovate are added into our B2B instance.

Luis + Jagar

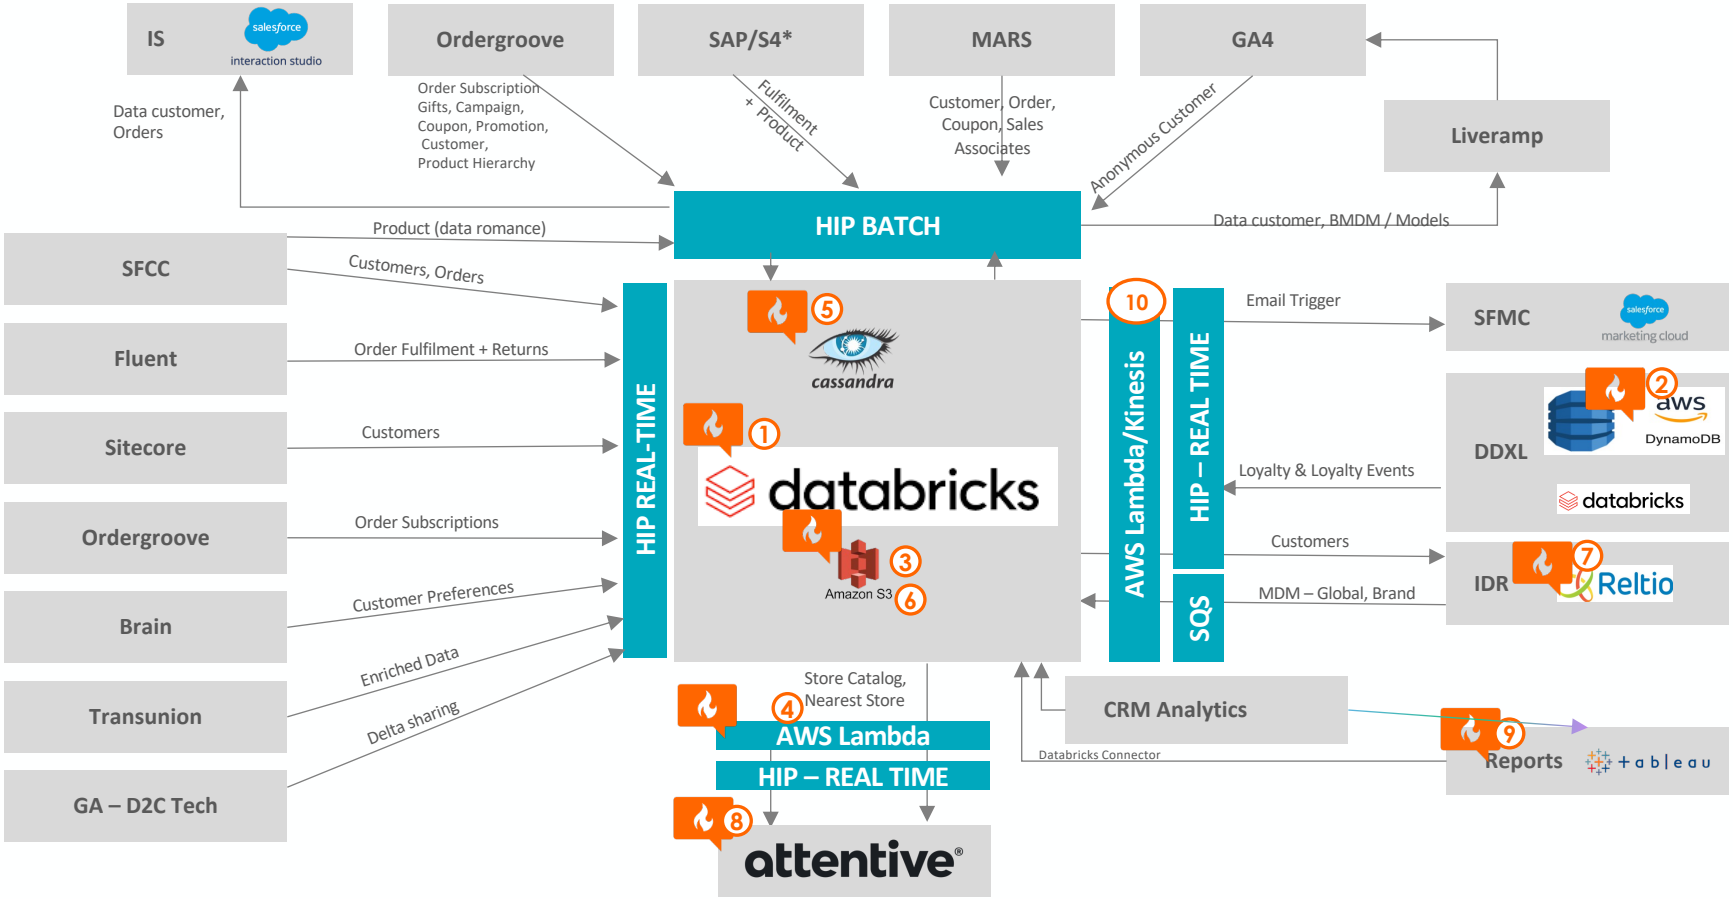

Tech Refactoring (AWS Services (S3, API Gateway, Lambdas)

HIP/QA partnership Needed

Environments Enablement
Have environments ready for Development

Impact refactoring from source systems for ingestion and consumption

DDX: INBOUND/OUTBOUND ARCHITECTURE (B2C)

*: from NEO, only customers sent

AURA ROADMAP (proposal)

*Planning tbc
